Aiming Towards Dynamics

DYNAIMERS CONNECTAI · MCP SERVICES

Let AI work inside your business systems. Safely.

We connect AI assistants to your ERP, CRM and documents using the Model Context Protocol (MCP). Your team asks in plain English and gets answers from live data — while you stay in control of every permission and every action.

- **Live ERP data**
- **Role-based access**
- **Human approval**
- **Every call logged**

THE OPPORTUNITY

dynaimers
Aiming Towards Dynamics

Your AI is only as useful as the data it can reach

Most companies already pay for AI assistants — but those assistants can't see the ERP, CRM or documents where the business actually runs. So staff copy-paste data into chat windows, with no control over who sees what.

97M+
monthly MCP SDK downloads, reported March 2026

Open
standard, now governed by the Agentic AI Foundation

June 2026
enterprise authorization layer added to MCP

1 → any
one connector per system works with any approved AI

WHY NOW

MCP has moved from experiment to enterprise infrastructure. The standard is settled and the security layer is in place — the open question is who sets it up safely, inside your own controls.

MCP, IN PLAIN WORDS

A universal plug between AI and your software

Model Context Protocol (MCP) is an open standard that lets AI assistants — Claude, ChatGPT or Microsoft Copilot — reach your business systems through one secure doorway. We build one connector per system; any AI you approve can then read live data and, only with permission, act.

Without MCP

- Data is copy-pasted into chat windows
- A custom integration for every AI tool
- Anyone can paste anything
- No record of what the AI saw or did

With Dynaimers ConnectAI

- AI reads live data where it already lives
- One connector per system, works with any AI
- Access follows each person's role
- Every request and action is logged

HOW IT WORKS

From a question to a trusted answer in five steps

1 · YOU ASK
A question in plain English, inside tools you already use.

2 · AI UNDERSTANDS
The assistant works out which data or action is needed.

3 · MCP CHECKS
The gateway confirms who you are and what you may see or do.

4 · LIVE DATA
ERP, CRM or documents return live data. Nothing is copied out.

5 · YOU DECIDE
An answer with its source, or a drafted action awaiting approval.

THE ARCHITECTURE AT A GLANCE

Your team
Finance · Operations · Leadership

→

AI assistant
Claude, ChatGPT or Copilot

→

MCP gateway
Identity, roles, masking, logs — set up by Dynaimers

→

Your systems
ERP · CRM · Documents · Compliance and ESG

Human approval: any payment, journal, order or email waits for a named approver.

SERVICES

Aiming Towards Dynamics

Six ways we bring MCP into your business

01 START HERE

MCP Readiness Assessment

A map of your systems and sensitive data, the top 10 use cases ranked by value, and the gaps to close.

2–3 weeks · Fixed fee

02

"Talk to Your ERP" Pilot

An MCP connector for Dynamics 365, Tally, SAP Business One or Zoho. Read-only to start.

6–8 weeks · Fixed fee

03

Agentic Workflows

Drafted POs, vendor reconciliations, receivable follow-ups and GST packs — a person approves each.

Priced per workflow

04

Governance & Controls

Role-based access, audit trails and approval policies, aligned with India's DPDP Act.

Advisory retainer

05

Managed ConnectAI

Hosting, monitoring, connector updates and new use cases every quarter.

Monthly retainer

06

Leadership Workshops

Half-day sessions for CXOs: what AI agents can do, the risks, and a 90-day plan.

Half-day · Fixed fee

WHERE IT PAYS OFF FIRST

Questions your people could ask on day one

FINANCE AND ACCOUNTS

“Which vendor statements don't match our ledger this quarter?”

PHARMA AND COMPLIANCE

“Which audit findings are still open, and what evidence is missing?”

PUBLISHING AND DISTRIBUTION

“Which titles are selling fast in the West zone but running low on stock?”

MANUFACTURING, AGRI AND ESG

“Pull this year's energy and emissions data for our BRSR report.”

SAFE BY DESIGN

Safe by design, not by afterthought

MCP lets AI act inside live systems. Over-permissioned access and manipulated instructions are real risks — so every ConnectAI rollout starts with four controls from day one.

Read-only first

Every engagement starts with read access. Write actions are added one at a time.

Your roles, enforced

The AI sees only what the person asking is already allowed to see.

A human approves

Payments, journals, orders and emails wait for a named approver.

Everything logged

Each question, data call and action is recorded for audit.

CA-LED CONTROLS

Designed by a Chartered Accountant-led team, so access, approvals and audit trails are built the way your auditors expect.
